

DEEX NODE

Passive income without the need to purchase and configure equipment.

What is a node in blockchain

A cryptocurrency node is a constantly working computer configured in a special way to work with a blockchain network and a wallet for a specific coin (token). Nodes are supported by crypto-enthusiasts on their own computers, provide network operation and must meet certain requirements.

Node

What it needs

PC

Support 24/7 operation with uninterrupted network access.

SSD disc

To maintain a node, you must have quick access to the disk.

Wallet

It should store a certain number of coins.

Dedicated IP

The best operation of the node is provided with the presence of a dedicated IP address.

DEEX CLOUD NODES

We have figured out how to completely eliminate the need for users to purchase, configure and maintain the health of the computer! And not only invented, but developed and created such a system! **Because the server that can function with DEEX node, has a demanding performance! Its cost is about \$20,000 and with the growth of the network requirements is constantly growing.** You no longer have to worry about constantly running the computer, spend money on its maintenance and service! We will do everything for you on our own facilities and equipment, and our specialists will take care of your node.
